What's Premier™ 6 all about?

It's about performance and less weight.

We took out the weight but kept the performance of a full depth SRW. Premier 6's 0.5" set-back easily constructs corners, curves and stairs while matching the structural parameters of wall blocks that typically weigh twice as much.

- Full-depth, open-core, anchor bar design
- Stone-filled cores create unmatched block-to-block unit shear strength
- Easily adjustable to near vertical wall construction

It's about your crew.

The combination of Premier 6's hassle-free design and light weight significantly reduces the burden on your crews.

- Crews construct the same square footage with less weight
- 43.5 lb. unit improves ease of access to difficult sites
- Cuts are fast and easy to make – saving time and wear on your blades
- No pins or clips, it's simple and uncomplicated
- Helps improve your sq. ft./man hour

It's about profitability.

The advantages Premier 6 fall right to your bottom line.

- Less weight means freight savings and more square feet delivered with each load
- Reduced weight makes moving blocks around the job site and installation faster and easier – saving valuable time on each job
- 0.5" setback reduces need for time-consuming field modifications

Premier 6 is the only SRW with extreme freight and construction efficiencies!
